acc. to DIN 1052-1

- 466 wood characteristic curves
- 28 building material characteristic curves
- moisture estimation
- display of moisture content u or wet-basis moisture content w
- external temperature probes connectable
- serial interface or analog output 0-1V, freely adjustable
- Future-proof via updates

Description: the GMH3830 offers important advantages in handling, user-friendliness, functional range and accuracy for your metrological work.

The absolute moisture content of 494 materials is displayed directly. The cumbersome usage of calculation tables now is history. Additionally you get a evaluation of your material state (wet/dry) of nearly all materials instantly. Of course the formerly used wood groups A, B, C and D of the predecessor models are further more supported.
